

# AFTER CLOSING POOL CARE GUIDE

Even though your pool is winterized and closed, it still requires some of your attention and care. In general, pools covered by a solid cover require the least amount of maintenance when closed, but a closed pool is not a maintenance-free pool. Since all pools are different, the care required for your closed pool will vary from your neighbor's pool.

## Things You Must Do

*Remove Water on Cover* - Using a cover pump, remove any accumulation of water on the cover. Do not allow more than 1-2" of water to accumulate on the top of the cover.

*NOTE: Mesh covers require a different type of maintenance. Please see our "Mesh Cover Care Program" leaflet.*  
*Maintain Proper Water Level in Pool* - Keep the water level in the pool no lower than 1" above the throat of the skimmer and no higher than 1" above the normal operating level.

*Check for Leaks* - Monitor the cover and water tubes for holes that will cause leaks. Patch as needed. *NOTE: Holes in the cover will seep water to the top of the cover. When this water is pumped off, the water level in the pool will drop. Watch carefully for this potential situation.*

*Remove Leaves* - Periodically remove the leaves and debris that collect on the cover.

## Things We Can Do

If you would like for us to perform these responsibilities above, our Service Department will gladly accommodate. In addition, we offer the following winter services:

- *Winter System Treatment* - Includes backwashing with SAND SCRUBBER and applying protectant to critical pump and motor parts
- *Heater Tune-Up* - Inspecting and preparing your heater for successful start up
- *Cartridge & DE Filter Cleaning* - Cleaning and preparing your filters for spring use.

***Our spring opening schedule books early.  
Mark your calendar to call us in March!***
